

Melbourne, Victoria

NGV International houses one of the nation's finest international art collections and often hosts exhibitions of the world's finest paintings and artefacts from museums around the world.

The exhibits are protected by a network of Notifier addressable analogue fire alarm control panels coupled with System Sensor detectors and VESDA, very early warning aspirating smoke detection.

This complete system is managed via the Notifier Network Control Station colour graphics package which provides total control of the network and a graphical overview of the site showing alarms, isolates and faults. This package also provides a complete history of events for the entire network.
